RAVALI SALAKALA

Senior Frontend Engineer | React | Next.js | TypeScript

Irving, TX 75062 | 940-843-8064 | ravalis607@gmail.com | linkedin.com/in/ravali-s-071043196

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 7+ years of experience building scalable, high-performance web applications for enterprise B2B e-commerce using React, Next.js, TypeScript and Redux. Experienced in Next.js application architecture, customer-specific pricing and quoting workflows, faceted product search, and shared component libraries used across multiple teams. Skilled in web performance optimization with SSR/SSG, code splitting, lazy loading, memoization and list virtualization, and in integrating GraphQL and REST APIs with Java Spring Boot microservices. Manages complex application state with Redux, Redux Toolkit, Redux Saga and React Query, and builds reusable, documented design system components with typed props and variants. Delivers WCAG 2.1 AA accessible UI backed by Jest, React Testing Library and Cypress, shipped through Jenkins, Docker and AWS pipelines. Works closely with product, design and backend teams to turn complex business requirements into fast, reliable user experiences. M.S. Computer Science, University of North Texas. Based in Irving, TX and open to onsite, hybrid or remote roles.

TECHNICAL SKILLS

Languages	JavaScript (ES5/ES6+), TypeScript, Java, Python, HTML5, CSS3, SASS/SCSS, SQL
Frontend Frameworks	React 18/19, React Hooks (useState, useEffect, useMemo, useCallback, useRef, custom hooks), Next.js (App Router, Pages Router), React Router, Redux, Redux Toolkit, Redux Saga, Context API, React Query, React Hook Form
Forms & State	React Hook Form, Yup schema validation, controlled components, Redux middleware, optimistic updates, client and server state caching
UI, Styling & Accessibility	Tailwind CSS, SASS, CSS Modules, Styled Components, Material UI, Storybook, responsive and mobile-first design, WCAG 2.1 AA accessibility, ARIA, keyboard navigation, cross-browser compatibility
Architecture & Performance	Component libraries, design systems, SSR/SSG rendering strategies, server and client components, code splitting, lazy loading, memoization, list virtualization, image optimization, caching, Core Web Vitals (LCP, CLS, INP)
Build & Tooling	Webpack, Babel, ESLint, Prettier, npm, Yarn, environment-based configuration, bundle analysis
Backend	Java, Spring Boot (REST APIs, microservices), Python, API contract design and backend integration
APIs & Integration	REST API consumption, GraphQL (queries, mutations, fragments), Axios interceptors, Fetch, integration with Java / Spring Boot microservices, API contract design, Postman, Swagger / OpenAPI, JSON
Headless CMS	Optimizely (headless), content modeling, preview mode, cached content delivery, personalization workflows
Databases	SQL, MySQL, PostgreSQL
Testing	Jest, React Testing Library, Cypress end-to-end testing, unit and integration testing, accessibility testing (axe), screen reader verification
Cloud & DevOps	AWS (S3, CloudFront, ECS), Docker, Jenkins CI/CD pipelines, Git, Bitbucket, GitLab, branching strategy, pull request standards, Vercel, Linux
AngularJS & Portal UI	AngularJS (1.x) widgets and templates, client controllers, Bootstrap, dynamic forms, client-side validation, cascading lookups, interactive dashboards and reports
Methodologies	Agile, Scrum, full SDLC, code review, mentoring, requirements gathering, technical documentation
Tools	Jira, Confluence, Figma, VS Code, Chrome DevTools, Lighthouse, Postman, Storybook

EDUCATION

Master of Science in Computer Science — University of North Texas, Denton, TX | Aug 2023 – May 2025

Bachelor of Technology in Electronics and Communication Engineering — Sreenidhi University, India

PROFESSIONAL EXPERIENCE

HD Supply Solutions (Remote) – Atlanta, GA
January 2026 – Present

Role: Senior Frontend Engineer

- Developed the frontend for a B2B e-commerce platform built in Next.js, React and TypeScript with Optimizely headless CMS, building storefront UI shared by multiple squads.
- Defined the Next.js application architecture, including server and client component boundaries, data fetching and caching patterns, and folder conventions adopted as the team standard.
- Built product detail, product listing, inventory and quote request flows for enterprise accounts, with faceted search, sorting, pagination and account-level personalization over a large enterprise product catalog.
- Delivered customer-specific contract pricing and entitlements on product and quote screens by resolving pricing, availability and permissions for the signed-in account.
- Replaced multiple REST round trips per page with typed GraphQL queries and fragments against Spring Boot microservices, significantly reducing API calls and over-fetching on catalog pages.
- Contributed to Java Spring Boot microservices by adding and updating REST endpoints, DTOs and request validation for catalog and quote features, keeping backend changes aligned with frontend contracts.
- Improved Lighthouse scores and Core Web Vitals, including faster LCP, on catalog and PDP routes using SSR/SSG, code splitting, dynamic imports and image optimization.
- Architected checkout and quoting state with Redux and middleware for async orchestration, optimistic updates, request cancellation and centralized error handling.
- Built typed Axios clients with interceptors for token refresh, error normalization and retry with backoff, standardizing failure handling across the storefront.
- Fixed critical virtualization, focus and scroll defects in the shared Motif component library and documented new components that other squads adopted in place of one-off builds.
- Built strong unit test coverage for catalog, cart and quote components with Jest and React Testing Library, and covered critical checkout paths with Cypress.
- Supported production by reproducing customer-reported defects from logs and browser traces and shipping root cause fixes through hotfix releases.
- Built to WCAG 2.1 AA with semantic markup, ARIA, keyboard navigation and focus traps in modals and mega menus, verified with axe and screen reader testing.
- Integrated Optimizely headless content into Next.js routes with content models, preview mode and cached delivery, letting marketing publish without a frontend release.
- Owned the Bitbucket Git workflow, including branching strategy, pull request standards and Jira linking, and drove tickets from grooming through release.
- Partnered with product owners, UX designers and backend leads to turn Figma designs and acceptance criteria into estimable, testable stories.
- Led code reviews and mentored developers on component design, state management and accessibility.

Environment: *React 18/19, Next.js, TypeScript, JavaScript (ES6+), Redux, Redux Saga, GraphQL, REST APIs, Java / Spring Boot microservices, Optimizely headless CMS, Motif design system, SASS, Tailwind CSS, Jest, React Testing Library, Cypress, Axios, Postman, Swagger, Git, Bitbucket, Jenkins, Docker, AWS, Jira, Figma.*

Siyanex Software Solutions LLC (Remote) – OH, USA
May 2025 – December 2025

Role: Frontend Engineer

- Built React and Next.js features in TypeScript for a high-traffic commerce storefront, covering product, pricing and promotion-driven components.
- Implemented cart and checkout with promotion and discount rules, tax and shipping estimates, and payment handoff to backend services.
- Built search and listing pages with faceted filtering, sorting and infinite scroll, keeping filter state in the URL so results stay shareable and indexable.
- Split server and client state between React Query and Redux with caching, background refetch and cache invalidation, eliminating duplicate API requests.
- Reduced initial bundle size with code splitting, React.lazy, Suspense, memoization and image optimization, and used SSR/SSG on category pages for SEO.
- Built reusable components to design system standards with typed props and variants, removing duplicate one-off implementations across pages.
- Built address, payment and account preference forms with controlled inputs and schema-based validation.

- Aligned API contracts and versioning with backend engineers, validated payloads in Postman and flagged integration gaps before implementation.
- Wrote Python scripts to automate test data setup and validate API responses across environments, speeding up integration testing.
- Wrote Jest and React Testing Library tests and contributed to Dockerized Jenkins CI/CD pipelines, reducing regressions release over release.

Environment: *React, Next.js, TypeScript, JavaScript (ES6+), Redux, React Query, REST APIs, GraphQL, Node.js, Python, SASS, Tailwind CSS, Jest, React Testing Library, Docker, Jenkins, Git, GitLab, Linux, Postman, Jira.*

HCL Technologies – Delhi, India **January 2018 – June 2023**

Role: Frontend Developer

- Built enterprise single-page applications in React, TypeScript and Redux Toolkit, using custom hooks to share business logic across modules.
- Designed a reusable component library on Material UI with typed props, variants and theming, reducing duplicate UI code across feature teams.
- Implemented role-based routing and protected views with React Router, JWT authentication and token refresh through Axios interceptors.
- Built data-heavy dashboards and grids with server-side pagination, sorting, filtering and debounced search over large datasets.
- Developed multi-step forms with React Hook Form and Yup schema validation, including conditional fields and dynamic field arrays.
- Built reusable custom hooks for data fetching, debouncing, pagination and permission checks, keeping components lean and easier to test.
- Integrated REST APIs from Java microservices with centralized error handling, request cancellation and retry logic, giving consistent loading, empty and error states.
- Worked with backend teams on Java Spring Boot services, updating controllers and service-layer logic to expose the data needed by new dashboard and form features.
- Built responsive layouts with SASS and Material UI theming and verified rendering across browsers and breakpoints.
- Applied WCAG 2.1 practices including semantic HTML, ARIA attributes, keyboard navigation and focus management across forms and dashboards.
- Improved dashboard load times with code splitting, React.lazy, memoization and list virtualization.
- Configured Webpack, Babel, ESLint and Prettier, and added Jest and React Testing Library tests to Jenkins CI pipelines.
- Led code reviews and mentored junior developers in Agile sprints with design, backend and QA teams.
- Built Service Portal widgets and custom UI pages with AngularJS, JavaScript, HTML5 and CSS3 for global support teams.
- Developed reusable AngularJS widget templates with client controllers, shared styles and configurable options, reused across multiple portal pages.
- Built responsive portal layouts on Bootstrap-based CSS and verified rendering across browsers and screen sizes.
- Added dynamic form behavior with client scripts and UI policies, including conditional fields, mandatory rules, client-side validation and cascading reference lookups, reducing invalid submissions and rework.
- Built interactive dashboards and reports for incident volume, change success rate and SLA compliance used in leadership reviews.
- Connected portal UI to external enterprise systems through scripted REST APIs, handling authentication, payload mapping, pagination and error states.
- Built Change Management request forms and approval screens covering risk and impact assessment, blackout windows and CAB scheduling.
- Debugged UI and client script defects using browser DevTools, system logs and transaction traces, and shipped permanent fixes.
- Gathered UI requirements from business stakeholders, translated them into technical specs and demoed delivered screens for sign-off.

Environment: *React, TypeScript, JavaScript (ES5/ES6+), Redux Toolkit, React Router, React Hook Form, Yup, Material UI, AngularJS, Bootstrap, HTML5, CSS3, SASS, Axios, REST APIs, Java / Spring Boot, Jest, React Testing Library, Webpack, Babel, ESLint, Prettier, Jenkins, Git, Jira, Agile/Scrum.*
